

“Multi Weather Display” features:

The “Multi Weather Display” (MWD) fitted to the Climatica display has an auto detect feature which automatically displays details about any Instromet sensor which is connected to it. Below are details regarding each sensor display attributes / features:

Wind Speed:	MPH, MPS, & KPH selectable (“MWD” only) Maximum gust measured Last 10minute wind speed average Programmable gust alarm
Wind Direction:	Daily Prevailing wind direction
Air Temp:	Current temperature – C / F selectable Min / Max readings On screen calibration
Aux Temp:	Current temperature – C / F (select on air temp screen) Min / Max readings On screen calibration User definable heading up to 8 characters
Rainfall:	Daily rain reading to 0.01mm resolution mm / inch selectable previous and current monthly totals
Sunshine hours:	Daily rain reading to 0.01-hour resolution previous and current monthly totals
Humidity:	Current humidity reading - % Min / Max readings Humitter or Wet & Dry sensor selectable Built in Dew point tables for Wet & Dry calculation.
Clock:	24Hr Date – day / month / year

Note:

When using a Wet & Dry bulb the “Aux” temperature display is no longer available as the display uses this reading for the Humidity calculation.

If a second temperature is required along with humidity, then it is necessary to use the Instromet Humitter instead of the Wet & Dry bulb.
